

PRESS RELEASE

BORESAVER IRONKLEEN LIQUID (IKL PRO) RECEIVES OFFICIAL APPROVAL

Geoquip Water Solutions, specialist supplier to water related industries, has announced that *IKL Pro*, the solution for calcium carbonate residues in the comprehensive *Boresaver* range, has now been approved by the Secretary of State under regulation 31 of the Water Supply (Water Quality) Regulations 1989 for use in potable water applications. Specially formulated as a combination chemical solution to resolve calcium carbonate problems, *IKL Pro* also offers a solution for iron oxide clogging. It is particularly effective for boreholes and pipelines that suffer from both problems.

One of the most effective range of bore cleaners in the world, the *Boresaver* products are powerful, biodegradable cleaning solutions for water supply systems contaminated with iron oxide, manganese oxide, iron related bacteria and calcium carbonate.

Aquabiotics Industrial, Geoquip Water Solution's partner, has been developing the *Boresaver* range of cleaning solutions for over 10 years and the range is now exported to over 14 countries worldwide. Two other *Boresaver* products – *Boresaver Ultra C* and *Boresaver Liquid* - are also approved by the Secretary of State under regulation 31 of the Water Supply (Water Quality) Regulations 1989 for use in potable water applications.

Boresaver can be used without dismantling equipment and will not attack or deteriorate any of the materials inside the system. When dosed correctly *Boresaver* is biodegradable, breaking down into the completely harmless components. Key components occur naturally in plants and vegetables, making the product environmentally friendly.

Boresaver users range from large mining companies and government water supply organisations to horticulturalists, farmers, industrial estates, university sites and commercial manufacturers who need clean water for their applications. Typical applications for *Boresaver* include geothermal, pipelines, water supply wells, quarrying, mining, leachate pumping, irrigation and remediation.

Geoquip Water Solutions has partner consultants in the United States, Australia, the UK, South Africa, Holland and Thailand who are experienced in local water supply issues and offer strong technical support.

For further details on *IKL Pro* or to find out more about the *Boresaver* range please contact Mike Deed on 01473 462046 or email mike@geoquipservices.co.uk
